Providing a Unique Way to Educate the Middle Level Learner!

Longfellow clinicians believe in guiding the 21st Century learner in a manner that is both meaningful and memorable. The basics are taught to provide a solid content foundation for all students to build their knowledge and critical thinking skills. Process is taught to provide students that "stickiness factor" or learning that will live on with them in their high school and post K-12 experiences.

La Crosse Design Institute introduces creativity and importance of imagination using basic design as the catalyst for delivering the district's high quality middle school curriculum. The school's integrated curriculum and hands-on approach to learning will focus on technology, engineering, architecture, manufacturing and science. The project-based learning approach requires content mastery and critical thinking.
